# PeopleSoft Test Framework
## What is the PeopleSoft Test Framework (PTF)?

Introduced in PeopleTools 8.51, PTF automates functional application testing and captures the entire process. PTF increases testing accuracy during upgrades and enables 100% validation of application testing while reducing time. PTF tests are PeopleTools managed objects which are tied to PeopleTools metadata and store references to all record, fields, pages, menu, and components used in a test in the database with a robust test development framework.

## Testing Made Easy With Elire's PTF Service Offerings

✓ **PTF Standard** - Jump Start of PTF tool and recording within your environment. Assist with the development of complex scripts via guided workshops focused on knowledge transfers. Development of PTF Strategy based on Elire methodology and recording/execution methods.

✓ **PTF Advanced** - Includes all of PTF Standard offering plus advanced drill-down Pivot grid reporting, and Elire xsl style sheets for local script reporting. We will also supply select vanilla pre-built PTF scripts to supplement the recording efforts of customized/bolt-on components.

✓ **PTF Premium** - Elire will oversee the entire PTF recording project utilizing multiple Elire Resources to completely automate the client's entire test script repository. This will utilize advanced recording methods that take into account negative testing, query-based data input, and various result validation approaches.

✓ **PTF Upkeep** - Support for current PTF users to maximize PTF usage, including Fit/Gap analysis to ensure you have covered your bases and are testing everything live users are using in production, New Script addition to your existing library, managed execution and reporting for your PTF scripts, and modifications and enhancements to support PeopleTools 8.59 fluid tiles and navigation.

✓ **PTF Script Packages** - Packaged pre-built scripts available for purchase for your HCM or Financials Environments. Various packages and pricing available based upon modules and environments needed. Does not include implementation or deployment costs.
