# Cloud Optimization Services

## Increasing User Adoption with Targeted Improvements to Oracle Cloud

You've laid the groundwork for your Cloud application during initial implementation – but there is still work to be done to maximize the value of your Oracle Cloud investment. Often initial implementations lay the foundation, but leave organizations with an incomplete application footprint, resulting in manual intervention, integrations, and processes.

---

### Take a targeted approach optimizing your Cloud application to:

- **Increase automation** – removing manual processes and giving more time for your users to be strategic
- **Reaffirm foundation stability** – ensuring your initial implementation laid the correct groundwork and structure to continue to build your Cloud footprint
- **Enable executive friendly dashboards** – increasing visibility for executives or casual users with information at their fingertips
- **Align business processes with application potential** – evaluating your business processes and identifying how it should work in Oracle Cloud, what changes need to be made to align processes with delivered functionality, and create solutions for any disconnects
- **Increase personalization** – including new pages with the Redwood Design Studio and Autocomplete to improve user efficiency or user experience, and reduce business reliance on IT for personalization
- **Unlock analytics** – utilizing dashboards and real-time information with Fusion Data Warehouse and establish a strategy for your data
- **Support growth** – aligning your application with your organization to ensure its flexible as you grow
- **Empowering Users** – with extended training and materials to increase user adoption and trust in your application

## Get Your Application Aligned with Expectations through Optimization

### *Cloud Optimization Assessment*

**Mobilize** – Set the foundation for success with onboarding, project planning, governance, scheduling and kickoff

**Current State Process Analysis** – Evaluate current state processes, disconnects, and maturity

**Current State System Analysis** – Gather and finalize requirements and perform current state system analysis

**Solution Analysis** – Review high level demos, proposed cost estimation & timelines, and requirement fit/gap analysis

**Next Steps** – Finalize recommendations and review implementation support

---

### Why Elire?

When it comes to Cloud, no one knows the product better than Team Elire. Elire brings to the table:

- **18+ Year Oracle Partner** – Recognized for superior customer service and Oracle Certified Implementation Partner
- **Certified Cloud Consultants** – With deep experience in Oracle Cloud applications and diverse industry backgrounds
- **The Cloud Project Fixers** – Elire specializes in taking “Red” Oracle Cloud projects back to the “Green” with our refined tools, project management, and Cloud Experts
