Path to Cloud - Day 2
Optimizing Oracle Cloud

Not everything is going to be done during Day 1. It's essential to continue targeted expansion and optimization efforts in order to have a big impact to automation and lower total cost of ownership on your Cloud investment.

Expansion

Continuing to expand your Oracle Cloud footprint by targeted module implementations, reporting and data analytics, AI/chatbots, and testing automation at the right pace for your organization, while lowering total cost of ownership

- **Module Additions –** Continuing to add to your Cloud footprint and consolidate your IT systems portfolio with additional modules along your Cloud roadmap with Elire's tools and methodology

- **Reporting & Data Analytics –** Expanding past operational reports to empower leaders with dashboards and real-time information to make key strategic decisions

- **AI/Chatbots –** Leveraging Oracle Digital Assistants to automate self-service tasks and help users be more efficient - including expense processing, self-service requisitions, candidate experience, and more

- **Testing Automation –** Utilizing Elire's TestSuccess Cloud Testing Automation tool to test new features ahead of Quarterly releases

Optimization

Assessing your current Oracle Cloud footprint and providing recommendations for improvements to get more value out of Cloud including personalization, training, and extended IT Support

- **Optimization Assessment –** Reviewing your Oracle Cloud Application to identify areas for system or business process improvement, re-configuration, new functionality available, and removal of manual processes to take advantage of the power within Oracle Cloud

- **Personalization –** Utilizing tools like Redwood Design Studio and Autocomplete to improve user efficiency and user experience – extending your application to meet your business needs while reducing business reliance on IT

- **Training –** Providing additional training and knowledge transfer to your users on new features available, improvements to Cloud business processes, and up-skilling to build confidence in Cloud

- **Managed Services –** Harnessing flexibility and cost savings by partnering with Elire for end-to-end application management and maintenance

Sunsetting On-Premise – Supporting your data retention strategy, data warehousing, and the decommissioning of your PeopleSoft Application
